

ABSTRACT OF THE INVENTION

A computer system and method is disclosed that includes having video kiosks distributed across various locations that record and transmit videos to a central database for inclusion in a portfolio. The video kiosks include a computer with a touch-screen display and
5 a camera, and can be full-size kiosks or mini-size kiosks depending on space and privacy considerations. A computer system and method is disclosed that includes providing authorized users with access to one or more portfolios, including video recordings received from a video kiosk. The video recordings can be a video resume or a video response to interview questions, as a few examples.
